

ROUND 2 — OFFICIAL BRIEF

PROJECT CODENAME: SURVIVAL.EXE

THE SITUATION

Round 1 narrowed 100 candidates to the group in front of you. 50 seats remain. This final task decides who fills them. You have 60 minutes, in teams of 4–5, to build a website whose job is to convince a live panel of judges your team should stay. It isn't a coding test in the usual sense — execution matters, but so does the pitch.

THE TASK

Build SURVIVAL.EXE: a single-page site arguing your team should not be eliminated. Think of it as a defense filed in website form. Design and copy count as much as code.

REQUIRED FEATURES

Every site needs all nine of the following, built for real or convincingly faked:

- 1. The Groveling Slider**A slider from “Confident” to “Please God No.” An emoji or face on screen degrades as it moves toward panic, ending in a crying animation at max. No static progress bars.
- 2. “Why We Deserve to Stay”**One headline, one sentence, maximum impact. This is your thesis.
- 3. Sins of Round 1 — Confession Wall**A sticky-note wall where each teammate confesses one Round 1 mistake, real or invented. Judges pick one per team to read aloud.
- 4. Auto-Apology Generator**A button that generates a new dramatic apology on each click. At least 3 distinct variations.
- 5. Roast Our Rivals**A section naming one specific rival team and taking a sharp, good-natured jab at them.
- 6. “Judges, Please” Chatbot**A fake chatbot box. Whatever a judge types, it replies with the same canned, increasingly desperate line. Creative replies score bonus points.
- 7. Rival Team Trial**A mock courtroom section putting one rival team on trial: a fabricated charge, a verdict, a sentence. Entertainment only — no real accusations.
- 8. Emergency Bribe Vault**A vault graphic that unlocks on click to reveal your bribe to the judges. The bribe must be absurd, not monetary.
- 9. “DO NOT ELIMINATE” Button**Large, unmissable, and it has to do something on click — sound, popup, animation. A button that does nothing gets you eliminated.
